

Nutrition Software

Q. Can you name the *only* high-end nutrition software package that provides you with the Nutrient Density View?

A. NutriBase IV (of course).

www.nutribase.com

View it... The Nutrient Density View lets you display the nutrient values for say, 100 kcal "servings" of all fresh vegetables in a spreadsheet view. This gives you an "apples-to-apples" comparison for all nutrients for hundreds or even thousands of vegetables at once (NutriBase displays nutrient data in a spreadsheet view). Identify the foods that provide the highest nutrition per calorie.

Rank it... If you want to know which of these 100 kcal "servings" are highest in say, Calcium, click the column header for Calcium to rank the foods from high-to-low based on their Calcium values. To reverse the sort, just click the header again.

Clients who are restricting their calories need to obtain as much nutrition as they can from the calories they take in. This is a good practice even if you aren't restricting calories. The Nutrient Density View is one more way that NutriBase not only makes your job easier... but makes your work *better* as well.

GET THE FACTS... BUY INFORMED... DON'T BE SORRY!
